Software Engineering Cover Letter - Google University Graduate

Dear University Recruiting Team,

I am writing to express my enthusiastic interest in the Software Engineer, University Graduate position at Google. As a senior studying Computer Science with deep hands-on experience in distributed systems and systems performance, I have long admired Google's engineering culture and foundational contributions to computing, from MapReduce and Spanner to Borg and modern tensor processing architectures.

Throughout my academic and internship career, I have focused on solving thorny systems problems. Last summer at CloudScale, I overhauled a distributed event processing service handling over fifty thousand transactions per second. At my university systems lab, I implemented a Raft consensus engine and evaluated its partition recovery guarantees. I thrive when profiling low-level bottlenecks and designing robust software that scales gracefully under real-world load.
